

## Run LRa05

**Beginning of the run : 17/12/2010**

**End of the run : 22/03/2011**

Duration of the seismo data : 96 days

Duration of exoplanet data : 92 days

Number of stars observed in the exo field : 4602

Number of stars observed in the seismo field : 5

Version of seismo data: V3.1

Version of exoplanet search data: V2.2

Only channel 2 is running

### Warnings :

- Data from 25/12/2010 to 31/12/2010 have wrong STATUS information : all data are marked as being in SAA, which is of course not true
- 3 days are missing from 04/03/2011 to 06/03/2011

These problems will be corrected in the next release (V4.0 seismo and 3.0 exo)

**Modification(s) of the temperature target of the CCDs : 0**

**Change of the photometric masks of the seismo programme :**

21/12/2010 from 18:02:28 to 18:03:16

**Number of stars observed in the planet-search programme :**

1830 chromatic light-curves (files EN2\_STAR\_CHR)

2772 monochromatic light-curves (2778 had been programmed but 6 of them contained no significant information) (files EN2\_STAR\_MON)

40 light-curves derived from on-board « imagerie » (files EN2\_STAR\_IMAG)

**Dates of the changing of the sampling of some stars in the planet-search program**

Day	Time	Chromatic stars	Monochromatic stars
21/12/2010	from 17:54:59 to 17:55:07	+1830	
10/01/2011	from 13:18:37 to 13:18:50		+371
